

Using Your Teaching Techniques for Your Career Success – Soft Skills

**Jim Litchko, Litchko and Associates
and Al Payne, Theta Solutions**

Abstract:

As an educator, you use the special techniques to successfully teach your students, now use them to advance yourself in your job. You can take those teaching techniques that you are comfortable with using and applied them to improving your management, leadership, selling, facilitating, decision-making situations at work. Jim and Al attribute all of their management and business success to the teaching techniques taught to them by their wives, both professional teachers. Wait time, timing, think-pair-share, visual learning, encouragement, lesson plans, though provoking tasks, tell-teach-tell, differentiation, cooperative learning, etc., all can contribute to increasing your career success. Jim and Al have both been executives, trainers, speakers, business developers and security experts within the commercial and government sectors. They will use these experiences to ensure that you will be able to apply these techniques quickly in your work environments. Additionally, they will provide a workbook that will further augment your understanding of the application of these techniques. This will be a highly interactive session that will allow the audience to contribute the stories of success, thus providing the audience with additional options.

Biographies:

Jim Litchko and Al Payne
